FOR IMMEDIATE RELEASE

UV Backups Introduces Compliant Email Archival Solution

GRAND RAPIDS, Mich., February 17, 2009—UV Backups (<http://www.uvbackups.com>) today introduced the industry's most affordable and easy to use email archival solution for small to medium sized businesses (SMBs).

With the ability to store up to 80 million emails, UV Backups acts as a secondary email gateway, automatically storing a copy of all inbound and outbound emails, including attachments. Email archives are encrypted and stored offsite, but always available for access through an intuitive Web interface.

Businesses can assign privileges to administrators, departments, and individuals for access to restore emails and search archival log files. All searches and retrievals from the archive are permanently logged, making it impossible to delete emails without a record of doing so.

“There are many reasons in today's business environment to maintain a robust email archiving system, and our solution offers enterprise-level functionality and integration at a fraction of the cost,” said Dustin Maranda, solution consultant for UV Backups. “Whether it's for compliance or regulatory reasons or just to protect against data loss disasters, our email archival solution is ideal, and we'll go the extra mile to prove it.”

Authorized users can search archives by sender, recipient, subject, date, and virtually any other field that appears in the header of the email. Once the desired message or messages have been located, users can view attachments and even restore the emails to a separate mailbox.

In addition to automatic integration with POP/IMAP mail servers, emails can be imported into the archive from Microsoft Outlook PST files, IMAP folders, or directly from Microsoft Exchange.

UV Backups offers a range of offsite data backup solutions in addition to email archival. The company offers specialty solutions for the Healthcare, Financial and Legal industries, and caters to SMBs and other growing businesses.

UV Backups leverages its integrated infrastructure to enable independent IT providers and resellers to offer the UV Backups as a private label, in-house solution. IT providers and resellers are able to manage their own end-contact and directly support their clients.
